The public transport market: Challenges in the future governance of public transport

Didier van de Velde

Faculty of Technology, Policy and Management Delft University of Technology

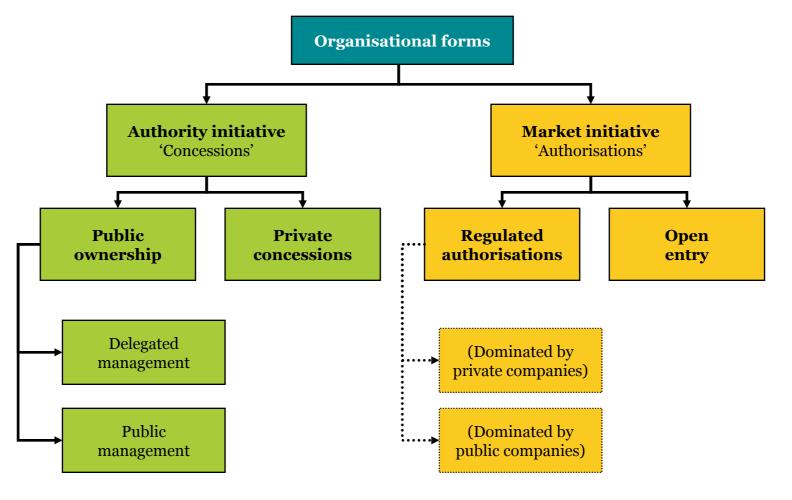

Content

- A few remarks on alternative governance regimes
- A few observations on some developments
 - Regulation
 - Technical
 - Socio-demographic
- A few questions for the future governance of public transport

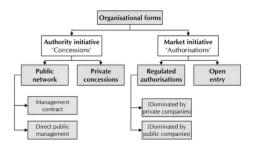

Various governance regimes: From free market to state monopoly

Some provocative thoughts: One utopia against the other?

Perfect authorities

- Optimal contracts
- Professional tendering
- Fair monitoring
- Forward looking, excellent planners
- Balanced view between competitive services and social services
- Non-selfish, benevolent politicians
- Perfect local democracy

Reality (... a bit exaggerated)

- Contracts based on political rather than economic rationality
- Unduly prescriptive tendering
- Lack of contract monitoring
- Conservative planners
- Exaggerated focus on social policy
- Prestige and hobby-led demagogic politicians

Perfect markets

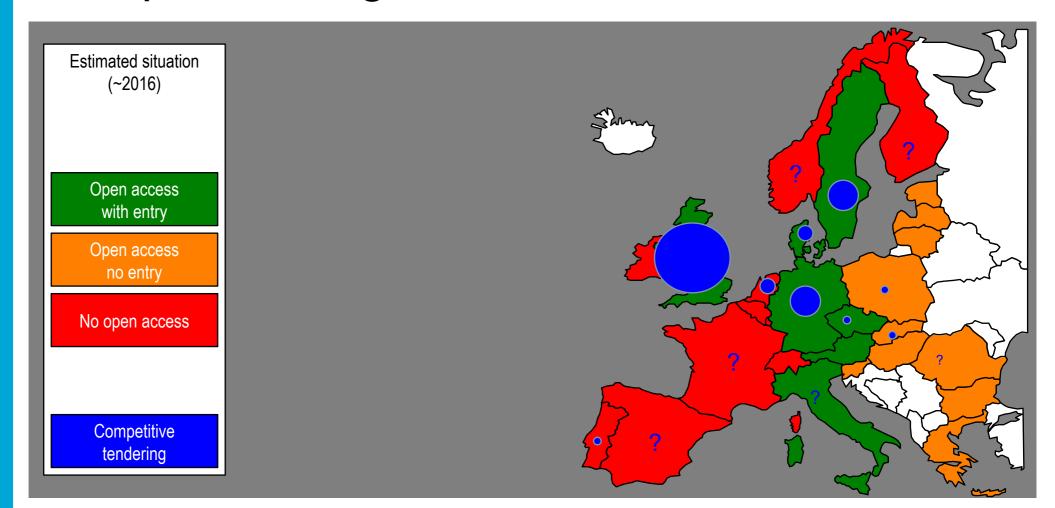

- Contestable markets
- Effective regulators
- Appropriate regulation addressing market failure (especially network effects)
- Clever authorities
- Innovative operators

Reality (... a bit exaggerated)

- Dogmatic regulation (no recognition of network effects)
- Ill-equipped regulators
- Barriers to entry
- Regulation not implemented
- Unskilled and unwilling authorities
- Disappointing operators

Competition regimes in the rail sector

Deregulation in long-distance coach sector

- Great Britain: since 1980
- Sweden, Norway, Finland: since the 1990s
- Poland, Czechia, etc.

- Germany: strong growth then concentration
- Italy: still in full evolution
- France: struggle for dominance?
- Netherlands,...:?

Integration of ticketing/services through the market

(...and many more...)

(...and many more to come...)

Rural services, community spirit

mobil samåkning

Als ons dorp Samobiel gaat gebruiken, is dat dan geen vrijbrief voor de gemeente of provincie om het OV-aanbod nog verder te verschralen?

Samobiel is geen vervanging voor het reguliere OV maar we kunnen wel een waardevolle aanvulling zijn op plekken waar de OV-verbindingen (bus, buurtbus, regiotaxi etc.) onvoldoende zijn volgens dorpsbewoners. Je kunt Samobiel natuurlijk ook gebruiken om bij die ene bushalte in of net buiten je dorp te komen en daar op de bus te stappen.

Voor overheden is Samobiel wel goedkoper dan het reguliere OV, dat op veel plekken en momenten op het platteland te weinig passagiers vervoert om rendabel te zijn. Het invoeren van Samobiel kost namelijk een fractie van wat het kost om een extra bus in de dienstregeling op te nemen. Maar in diverse gesprekken met verschillende overheden hebben wij nog niets gehoord over intenties om buslijnen te vervangen door Samobiel. Gemeentes en provincies zien Samobiel als een aanvulling op het reguliere OV, net als wij. In Zweden werden juist bepaalde vervoerslijnen weer ingevoerd en andere aangepast toen duidelijk werd hoe vaak bepaalde routes afgelegd werden door gebruikers van onze Zweedse zusterorganisatie Mobilsamåkning.

Automatic vehicles

- Driverless shuttles
 - o Paris
 - Netherlands
 - Sweden

Driverless car

Source: paris.fr

Socio-demographic changes

- Changing mobility of elderly (car and driver's licence ownership)
- Increased mobility of former captive PT groups due to e-bike
- Declining demand for weaker "social" services
- Remaining services become more "commercial"
- Declining need for monopoly (network) tendering

Sociodemografic developments

More aged Less younger

Individualisation

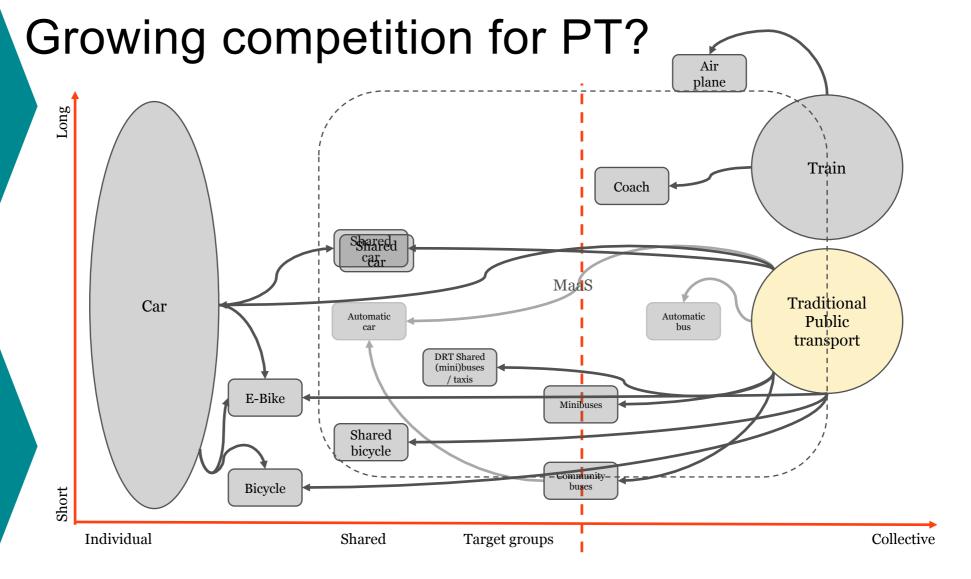

Size? Relevance? Influence?

Technical developments

Internet / Smartphone Integrators Shared systems

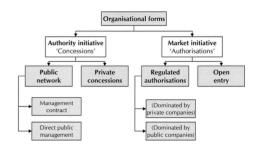

Electric vehicles

Driverless

Future governance principles?

Determine Contract/concession/franchise Exclusivity	INITIATIVE	Release Market rule No exclusivity	
Regulate Full specification Input-steering No negotiation	STEERING	Stimulate Development incentives Output-steering Negotiation	
Constrain Submit all initiatives to prior approval	PROCESS	Facilitate Pro-active approach to stimulate synergies	

Summarising: Which public transport governance regime for the future?

- Various free market initiatives nibbling at public transport's traditional markets
 - Mixed effects on "commercial" potential of public transport
- Technical developments have not yet come to a new equilibrium
 - More automated, decentralised, tailor-made systems to come
 - Has the potential to solve some social issues
- Public transport governance (in several/many countries) is based on monopoly, authority control, centralised planning
 - Diminishing congruence with the governance of a growing part of passenger transport systems

Challenges

- Can contract be made not to hinder, and even to stimulate, (good) innovations?
- Can the (free) market be adequately regulated within a congruent regulatory regime for all transport services?
