

# Open Data Reusers in the picture

Dr. Frederika Welle Donker,  
[f.m.welledonker@tudelft.nl](mailto:f.m.welledonker@tudelft.nl)

Open Data Life Cycle Workshop, 30 Oct. 2020

This project has received funding from the European Union's Horizon 2020 research and innovation programme under Grant Agreement Number 857592 - TODO

# Agenda

**A**

## **Open Data in the Netherlands**

Policies and portals

**B**

## **Research overview**

Research questions and methodologies

**C**

## **Open data users**

Per portal and combined

**D**

## **Barriers for OD users**

And how to tackle these barriers

**E**

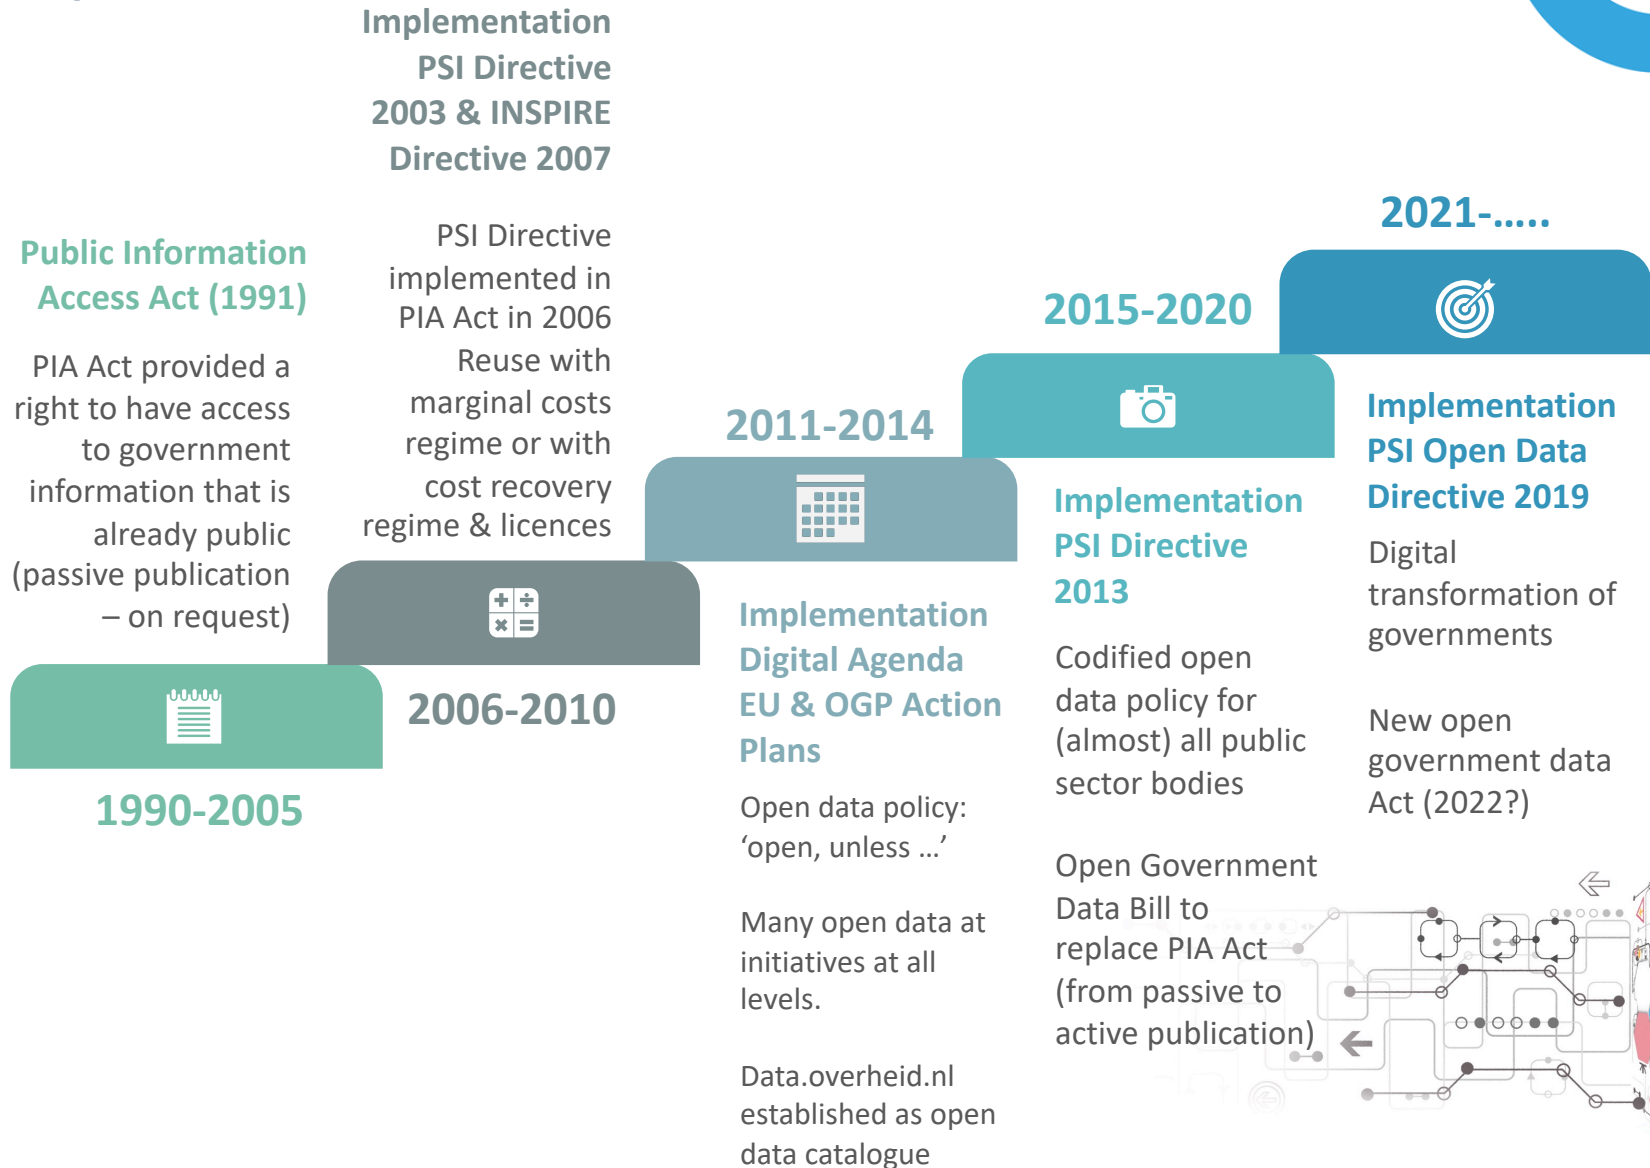

## **Conclusions**

Recommendations for future research

# Open Data in the Netherlands

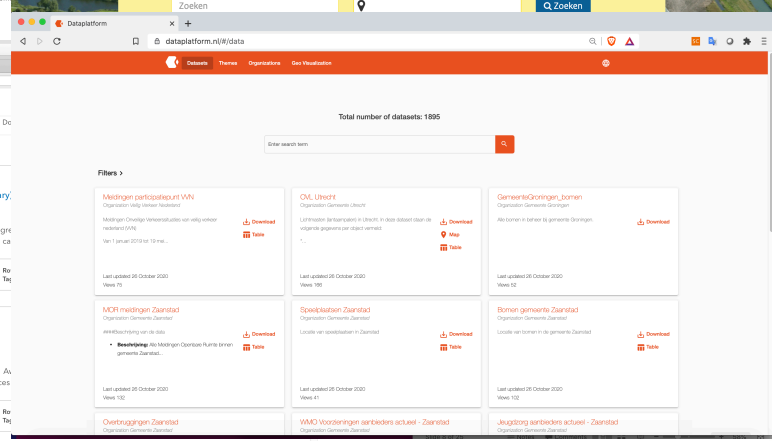

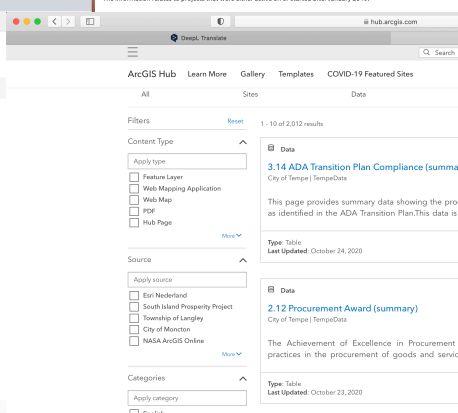

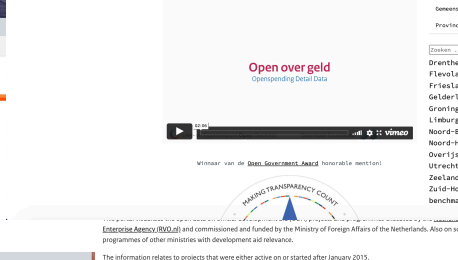

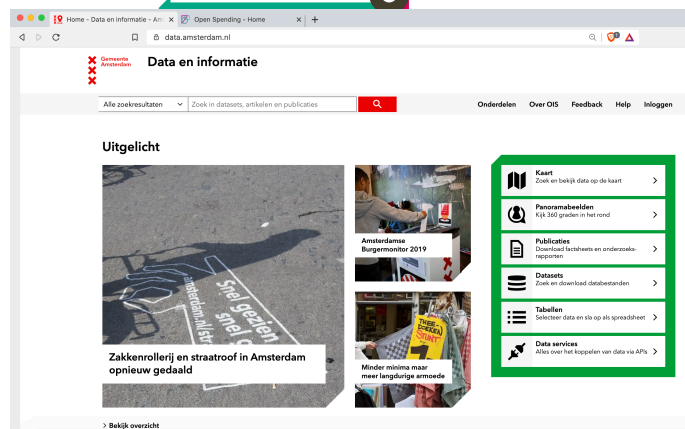

# Many open data portals ....

## National Road Traffic Data Portal

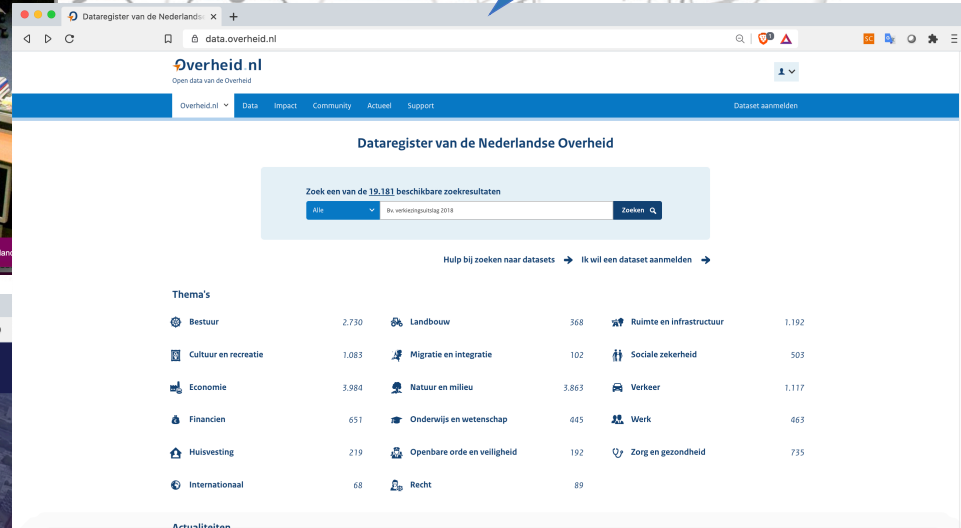

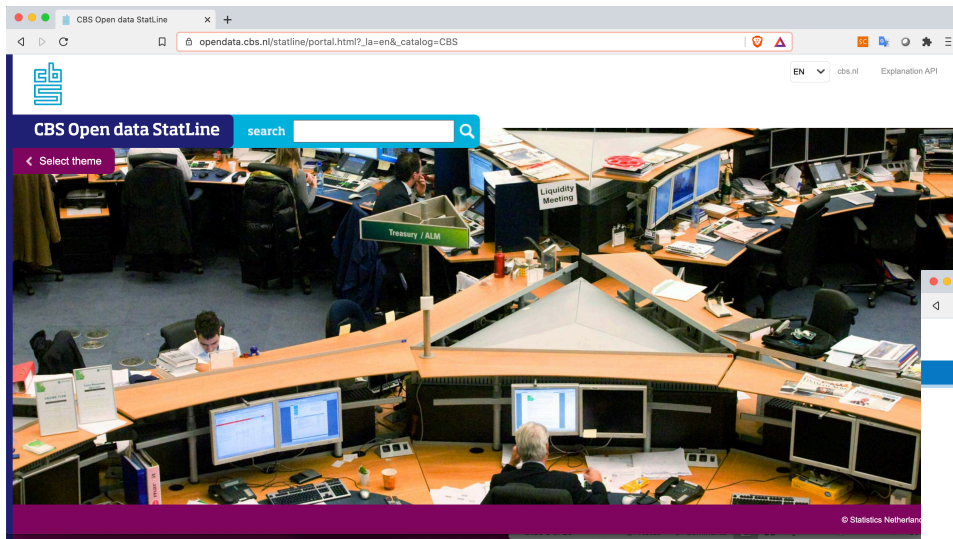

In NDW, Dutch governments work together to collect, combine, store and distribute mobility data. These data are essential for traffic management, they feed countless traffic information services and form a solid basis for the mobility policy in the Netherlands.

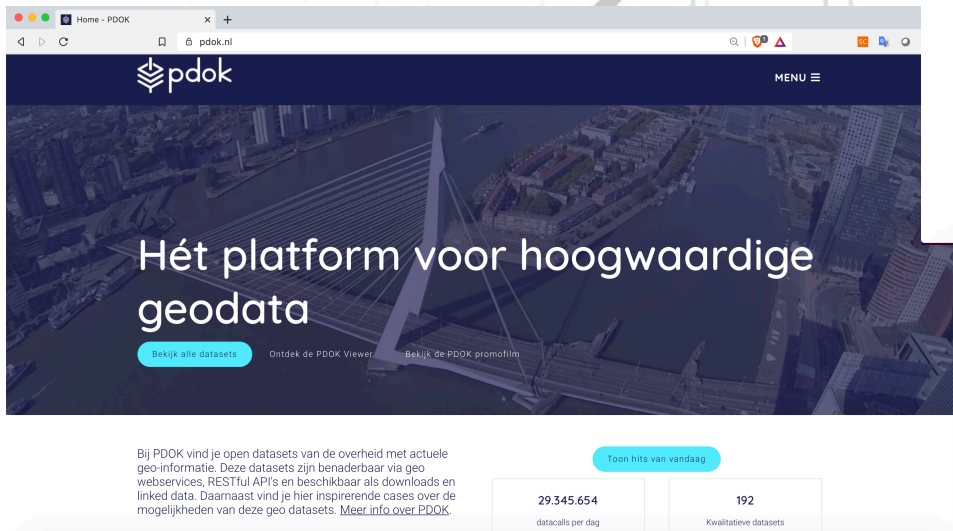

# For our research

Statistics  
Netherlands, open  
statistical data  
platform

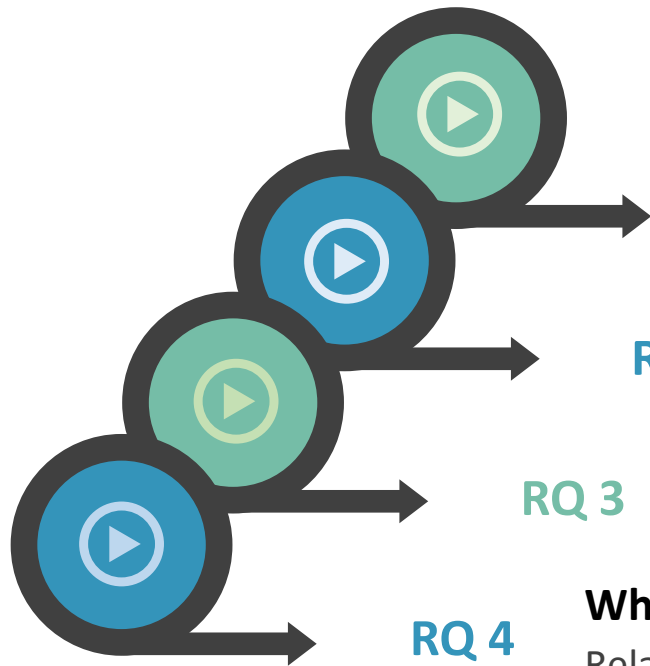

National open  
data catalogue  
data.overheid.nl

PDOK - Public Service  
on the Map, national  
geodata platform

# Research questions

**RQ 1** **Who are the Open Data users**  
Types, categories, interrelationships

**RQ 2** **In which way is open data reused**  
Purposes, search strategies, access services

**RQ 3** **Which barriers do open data reusers encounter?**  
Findability, technical accessibility, data quality

**RQ 4** **What are the needs of open data reusers?**  
Related to supply (which data and in which way) and to demand (e.g. user participation)

# Research methodologies

## Literature review

- Categories of open data reusers
- Different types of analyses

## Quantitative analysis

- IP numbers of log file data Jan-Feb 2019
- Twitter sentiment analysis

## Qualitative analysis

- Online survey (Oct '18-Jan '19)
- Workshop (March '19)
- Interviews with selected OD users (May '19)

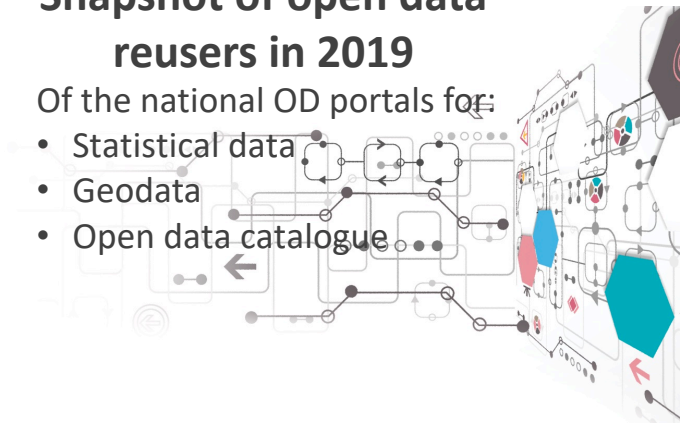

## Validation of results

- Quantitative results with suppliers
- Online survey with interviewees (June '19)

## Snapshot of open data reusers in 2019

Of the national OD portals for:

- Statistical data
- Geodata
- Open data catalogue

# Types of Open Data Reusers

- Commercial
  - Micro enterprises (1-9 staff)
  - Small to medium enterprises (10-249 staff)
  - Large enterprises ( $\geq 250$  staff)
- Not-for-Profit / non-commercial
  - Government organisations
  - NGOs / societal organizations
  - Research / education institutes
  - Concerned citizens

# IP Log File Analysis per platform

01

## Top 10 datasets

Which 10 datasets are requested most often / no. of hits

02

## Which countries

Which country do most requests originate from

03

## Top 10 user groups

Which sectors / types of users can we identify

04

## Top 10 users

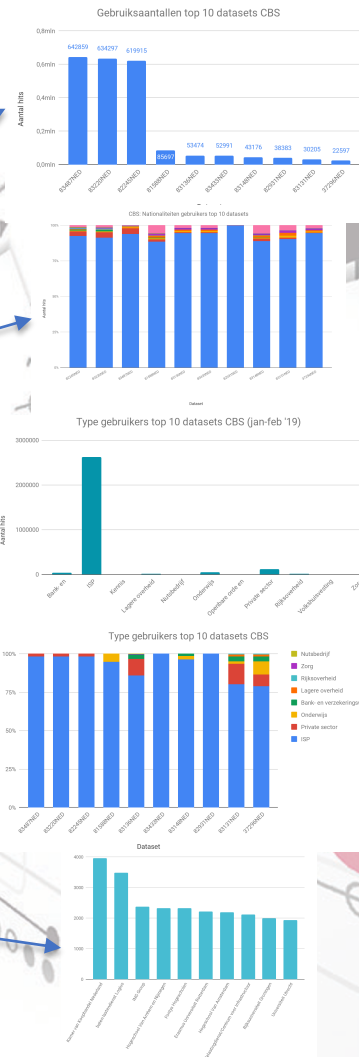

Which large-scale users can we identify

# Results Open Statistical Data Portal

- 'Key Figures Neighbourhoods & Districts', and 'Population & Households' most popular datasets
- Relatively many requests from abroad, e.g. USA, Germany and Hong Kong
- Most users in ISP category
- Especially Consumer Prices & Key Figures popular with private sector
- Top 10 large-scale users mainly public sector, higher education and banking/insurance companies

# Results PDOK Open Geodata Portal

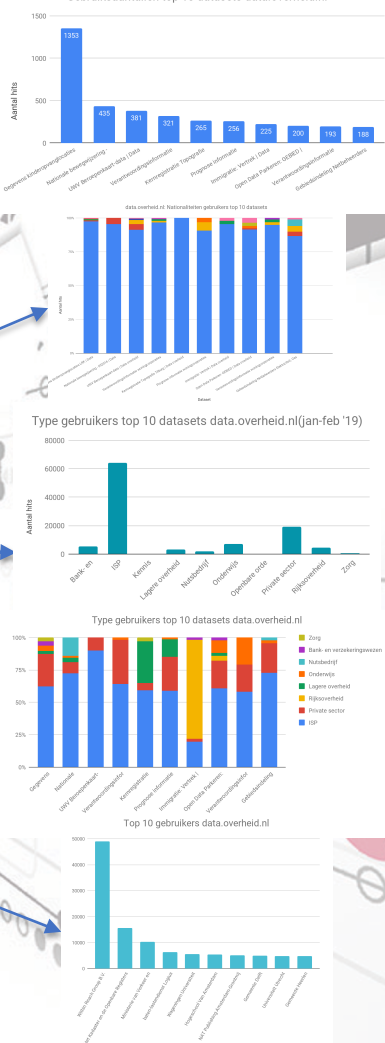

- Key Registers/Base Data, aerial photography and WOZloket most popular
- Most requests from Netherlands
- Most users ISP category
- Top 10 datasets used by all categories of reusers
- Top 10 large-scale users mainly public sector, higher education and DNB, the Dutch Central Bank

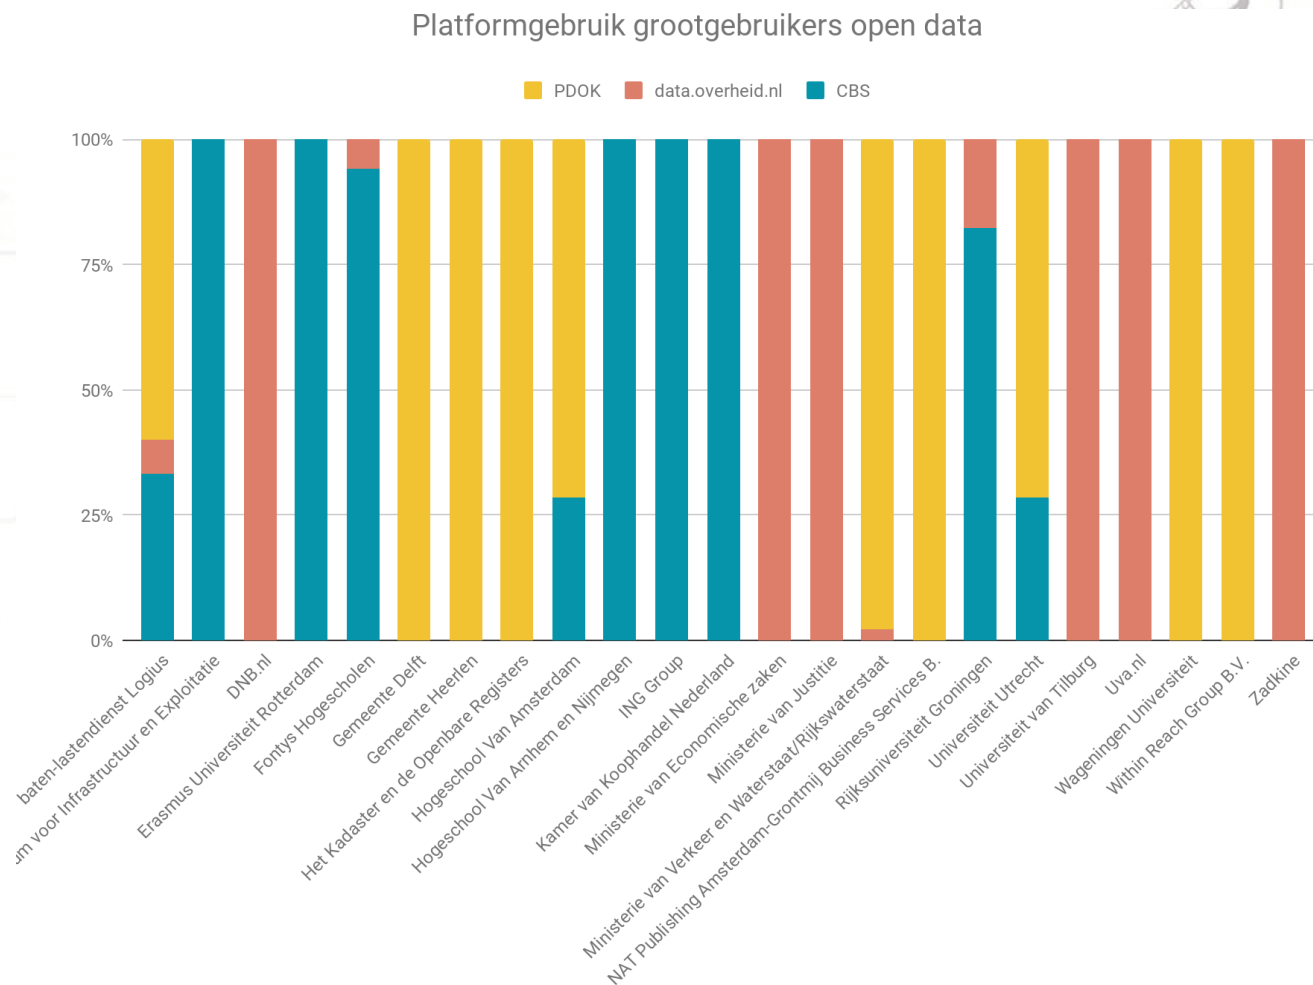

# Results data.overheid.nl service

- 'Information Childcare Locations' and 'Accountability Information Housing Associations' most popular
- Most requests from Netherlands, then UK and USA
- Most users in ISP category
- Reasonable spread datasets per category
- Top 10 large-scale users mainly from Ministries, higher education and private sector

# Platform usage large-scale open data users

# Interviews with OD reusers

- Shortlist of 20 OD reusers, selected from
  - Online survey respondents
  - Internet analysis news items related to open data
- 12 reusers interviewed, with even spread of:
  - Micro enterprises
  - SME / large enterprises
  - NGOs
  - Tinkering citizens
  - Knowledge institute / researchers
  - Public servants

# Results interviews

	Commercial organisations	Non-commercial organisations
Commercial purposes	<ul style="list-style-type: none"><li>• Fee-based services / apps</li><li>• Internal business processes</li><li>• Custom-made products for 3<sup>rd</sup> parties</li></ul>	<ul style="list-style-type: none"><li>• Internal business processes</li></ul>
Societal purposes		<ul style="list-style-type: none"><li>• Free services / apps</li><li>• Community services</li><li>• As a spin-off of other activities</li></ul>

# Results interviews

	Commercial organisations	Non-commercial organisations
Commercial purposes	<ul style="list-style-type: none"><li>• Fee-based services / apps</li><li>• Internal business processes</li><li>• Custom-made products for 3<sup>rd</sup> parties</li></ul>	<ul style="list-style-type: none"><li>• Fee-based services / apps</li><li>• Internal business processes</li><li>• Custom-made products for 3<sup>rd</sup> parties</li></ul>
Societal purposes	<ul style="list-style-type: none"><li>• Free services / apps</li><li>• Community services</li><li>• As a spin-off of other activities</li></ul>	<ul style="list-style-type: none"><li>• Free services / apps</li><li>• Community services</li><li>• As a spin-off of other activities</li></ul>

# OD search strategies and sources

- Search via
  - Google
  - Own network
  - Social Media
  - Data catalogues (data.overheid.nl, National GeoRegister)
- Sources
  - Mainly direct from original source
  - Via thematic platforms (CBS, PDOK, NDW)
  - Occasionally via commercial enterprises (Esri)

# Most mentioned barriers

## Open data of local authorities:

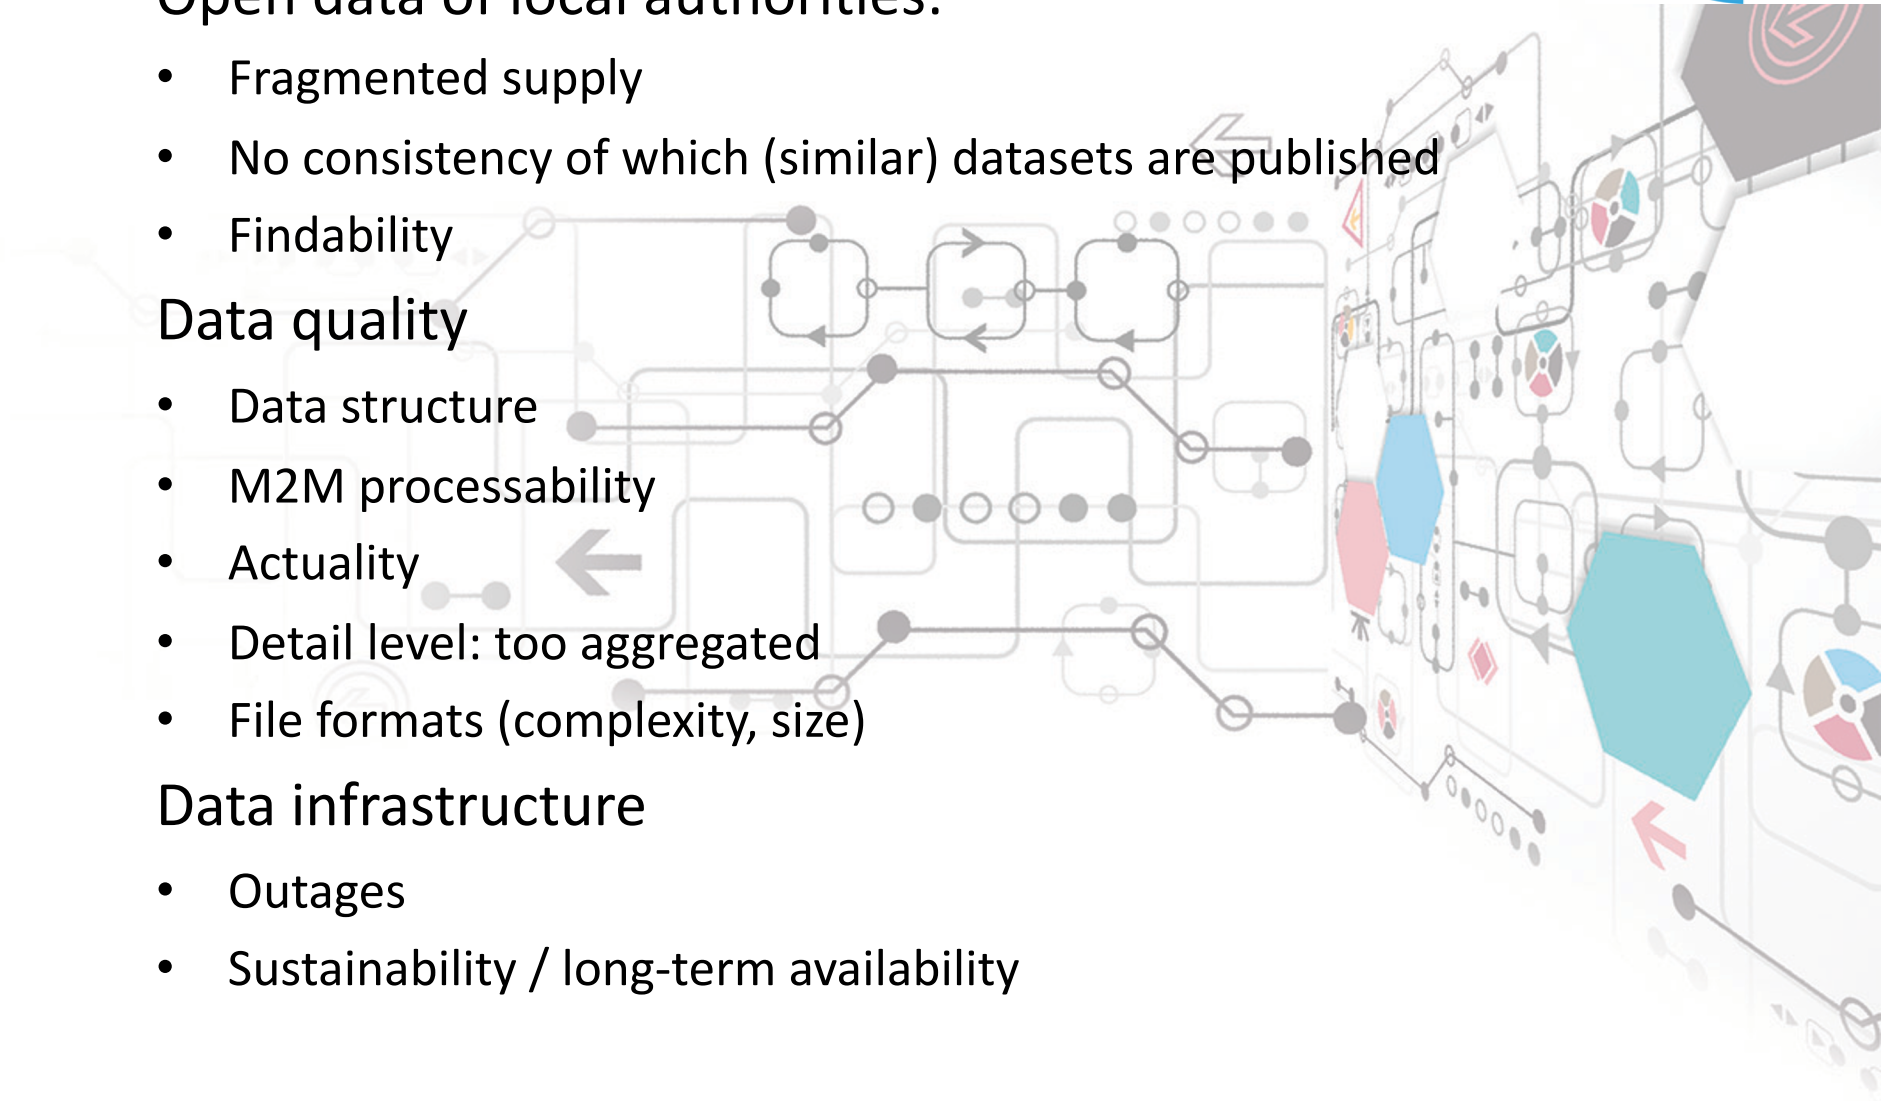

- Fragmented supply
- No consistency of which (similar) datasets are published
- Findability

## Data quality

- Data structure
- M2M processability
- Actuality
- Detail level: too aggregated
- File formats (complexity, size)

## Data infrastructure

- Outages
- Sustainability / long-term availability

# Needs of OD reusers

- Improved feedback mechanisms and timely response
- More central direction to coordinate open data of local authorities
- Data of local governments via 1 central platform
- Multiple file formats / multiple services
- More standardisation
  - Data structure
  - Use of international standards for APIs
- Persistent identifiers
- Data governance
  - Governance of open data / open data management
  - CIO/CDO/Data Stewards within the organisation

# Suggestions of OD reusers

- Binding agreements with all levels of government and public enterprises which datasets should be available
- Match dates of updates with business deadlines
- Data with higher level of detail made available via APIs
- Provide templates for standardised and consistent coding for similar datasets
- More integration between data platforms
- Government: make better of use expertise of private sector / knowledge institutes to find solutions
- Data Suppliers:
  - Don the cap of reusers more often
  - Visit companies

# Main conclusions

- Open data are reused in emerging sectors and for many purposes
- Improve findability of data:
  - intuitive search functionality for non-expert reusers
- Improve open data governance:
  - (Top-down) directing and coordinating open data of local governments and public enterprises
  - Unambiguous semantics / structure / standardisation
- Think in societal challenges and consider which datasets will contribute to solutions
  - involve per challenge stakeholders & scientists
  - Commercial reusers, esp. SMEs have limited time but need to be involved as stakeholders

# Future directions for this research

- Need to refine log file analysis
- Need to interview large scale reusers missed in 1<sup>st</sup> round of interviews
- Need to further analyse cross-links between data platforms, datasets and reusers (which unique IP address used which data, etc.)
- Need to develop tools to systematically analyse reusers
- Need to assess 2<sup>nd</sup> order effects of open government data (for business cases)

Thank you, and please ask any  
questions you may have
